## DETAILED ACTION

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on December 13, 2006 has been entered.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-12, 18-28, 34-43, 49-52, 57-60, 65-68 and 73-75 are rejected under 35 U.S.C. 103(a) as being unpatentable over Curatolo et al (U.S. Patent No. 5,605,889) in combination with Kabanov et al (WO 99/39731).

Art Unit: 1623

Curatolo et al disclose oral delivery of azithromycin and also disclose therapeutic packages of azithromycin containing the dosage forms (column 2, lines 35-61) but do not disclose a method of increasing the bioavailability of azithromycin with poly(ethylene glycol)-block-poly(propylene glycol)-block-poly(ethylene glycol) (Pluronic 61). However, since Kabanov et al disclose that bioavailability of many different types of drugs can be improved by administering said drugs in combination with Pluronic 61(page 17), a person having ordinary skill in the art at the time the claimed invention was made, would have been motivated to improve bioavailability of azithromycin by administering the same with Pluronic 61.
